

EVENT DESCRIPTION

Meetings of the Steering group from Castilla y León region

RES-e Regions IEE PROJECT EIE/04234/S07.38605.

Last meeting of the steering group

Date and Place: 13th February, 2007 in the meeting room of the first floor in EREN building in León.

Number of participants: 16. Permanent members from the steering group and some stakeholders from the sector participated in the meeting.

Short description: The Steering group composed by the permanent members and other stakeholders from the Res-e sector discussed and analysed the new feed in tariff system for electricity production from renewable energy sources in Spain.

The topic to discuss was the future of this new Res-e tariffs related with the new legislation for the renewable electricity production. By this moment, a draft of the new legislation was studied and analysed for going to be approved.

Some discussions have emerged about this new feed in tariff system for electricity production from renewable energy sources in Spain, which seem to reward more some technologies than others. For example increasing the incentives for biomass and decreasing them for wind power.

Aim: The aim of the meeting was to establish a clear role the stakeholders of the Res-e sector regarding the review of the new feed in tariff system in Spain.

Topics Programme: New feed in tariff system: the Real Decree.

Background

The uncertainty and doubts regarding the benefits for investors of the new Real Decree of Res-e tariffs related to renewable electricity production. A draft document of the future Real Decree was used as a work document during the meeting.

Results and follow-up:

The meeting was a hard workshop. As more time was need, a second meeting was called when the Real Decree will be approved.

The conclusions from the meeting will be sent to the national responsible authority.
