

## EVENT DESCRIPTION

### RES-e Regions, WP 3

**Title:** Informationsveranstaltung: Fotovoltaik – nachhaltige Geldanlage vom eigenen Dach  
Information event: Photovoltaic – Sustainable investment from the own roof

**Date & location:** 8<sup>th</sup> of June 2006, festival room of the town-hall in Saarbrücken, Saarland

**Organiser:** IZES gGmbH

**Partner:** the municipality of the capital Saarbrücken

**Number of Participants:** 50

**Short description:** The event was targeted to owners of big roof surfaces and individual house owners, to craftsmen and representatives of industry and trade in the area of Saarbrücken as well as to the members of the town council.

**Background:** Like already in the municipality of Ensdorf the visits in the municipality of Saarbrücken during the project runtime showed also a briskly interest in the subject. A special interest was shown for a larger dissemination of information about RES e among individuals and craftsmen to boost and encourage the installation of more RES e plants in the municipality. It is characteristic that these municipalities which are already rather advanced in this sector, are interested to make still more efforts for higher installation density of RES e plants in their district.

**Aim & programme:** The aim of the event was informing the public about economical advantages and technical details of PV-plants. The programme consisted in three parts: Some important details of PV-technology, especially for small and medium sized plants. Financial advice with some examples and the presentation of the different investment models for small and medium sized plants. This third part was of a special importance because in bigger towns not all people have the possibility to invest in own RES e plants. So we wanted to show also investment models for tenants and for smaller budgets.

Also this event was accompanied by an information stand of a PV fabricant and trader who could give practical targeted advice to the participants.

**Results, follow-up:** The next event will take place on 21<sup>st</sup> June in the Chamber of Crafts in Saarbrücken and will deal with the subject of grid access of RES e plants.
