

Study tour EREN: Short description. RES-e Regions PROJECT

Date & location: 28 Feb-3 March, 2006. Upper Austria (Austria)

Organiser: EREN-O. Ö. Energiesparverband

Number of Participants: 16

Background

A study tour for Castilla y León energy business and representatives from the regional administration was organised by EREN with ESV collaboration. This is the second study tour carried out by the Castilla y León group.

Aim:

The aim of the study tour was the co-operation and transfer of technology between the region of Castilla y León and the region of Upper Austria.

Programme:

The study tour was focused in visiting some RES companies and installations round Austria. Some of them are:

SolarFocus Company:

SolarFocus is a company which develops Thermal and Electric Reflecting Concentrator (TERC) systems that are the most cost effective on-site renewable-energy technologies in the market. The products are designed to compete with utility grid pricing.

The Solar Focus systems integrate solar PV and thermal technologies to provide both electricity and hot water for commercial and industrial applications.

By concentrating the sun with mirrors and generating both electricity and heat, we capture more total solar energy, because PV only uses 15% of the sun's energy.

KWB factory:

The company is pioneer in a mix system of producing heating and electricity in a same equipment. A generator with 1Kw of capacity has been included in this mix innovative biomass system.

In addition the ENERGIESPARMESSE fair in Wels, was also visited by the group. Personnel from ESV and a translator (German-Spanish; Spanish-German) were accompanying the Castilla y León group during the visit to the fair.

Results:

Some manufacturers, distributors, researchers and personnel from the regional administration, including politicians from Castilla y León have got in contact with manufacturers, engineers, machinery distributors and consultants of Austrian companies, during the organised study tours and also in the fair.
